# VA Master FAM540 Metal Cone Variable Area Flowmeter

Measurement made easy

For measuring liquids, gases and steam

Graphical 2-line LCD display

**Magnet stick operation**

- Configuration also possible with closed housing

Easily adjustable for new operating conditions

**Approvals for explosion protection**

- ATEX
- IECEx
- FM, CSA

# VA Master FAM540

## Metal Cone Variable Area Flowmeter

### Overview

Model	FAM541	FAM544	FAM545	FAM546
	Standard design  G10448	Hygienic design  G10449	With PTFE liner  G10450	With heating jacket  G10451
Measured error in accordance with VDE / VDI 3513	1.6 % qg = 50 %	1.6 % qg = 50 %	2.5 % qg = 50 %	1.6 % qg = 50 %
Reproducibility	0.25 % of measured value	0.25 % of measured value	0.25 % of measured value	0.25 % of measured value
Process connection	Flange in accordance with DIN, ASME, JIS, female thread	Thread DIN 11851, SMS 1145	Flange in accordance with DIN, ASME, JIS	Flange in accordance with DIN, ASME, JIS
Nominal connection diameters	DN 15 (1/2") ... DN 100 (4")	DN 25 (1") ... DN 100 (4")	DN 25 (1") ... DN 100 (4")	DN 25 (1") ... DN 100 (4")
Maximum measuring medium temperature	400 °C (752 °F)	140 °C (284 °F)	120 °C (248 °F)	400 °C (752 °F)
Maximum pressure rating	PN 400 / class 2500	PN 40	PN 40 / class 300	PN 100 / class 600
Wetted material	Stainless steel 1.4404 (316L), 1.4571 (316Ti)	Stainless steel 1.4404 (316L), 1.4571 (316Ti)	PTFE	Stainless steel 1.4404 (316L), 1.4571 (316Ti)
Housing material	Stainless steel 1.4404 (316L), 1.4571 (316Ti)	Stainless steel 1.4404 (316L)	Stainless steel 1.4571 (316Ti)	Stainless steel 1.4404 (316L), 1.4571 (316Ti)
Gasket material	Viton A (DN 15 only)	Viton A (DN 25 only)	PTFE	Viton A (DN 25 only)

#### Indicator / transmitter

IP degree of protection in accordance with EN 60529	IP66, IP67, NEMA 4X
Mechanical indicator	Analog indicator with or without alarm signaling unit
Electronic indicator	Analog indicator with transmitter 4 ... 20 mA, with or without LCD indicator
Communication	HART protocol (only for analog indicators with transmitters)
Power supply	Without alarm signaling unit: no power supply Analog indicator with alarm signaling unit: 8 V DC via switch amplifier Analog indicator with transmitter: 10 ... 46 V DC (Ex: 10 ...30 V DC)
Indicator housing material	Al Si 12 material number 3.2582 (copper content 0.1 %), stainless steel 1.4408
Paint	Epoxy paint 80 ... 100 µm; Bottom color: RAL 7012, cover color: RAL 9002 (No housing paint for stainless steel indicator housing)

#### Approvals

Ex-approvals	ATEX / IECEx: Zone 0 / 1 / 2 / 21 FM / cCSAus: XP, IS, DIP, NI, FM Zone 1 + 2
Sealing concept	Dual sealing in accordance with ANSI / ISA-12.27.01
SIL approval (not for FAM545)	Analog indicator with alarm signaling unit: SIL 2 Analog indicator with transmitter: FMEDA evaluation

## Introduction and basics

### Installation conditions

- The installation recommendations of VDI / VDE Directive 3513 must be observed.
- The flowmeter is installed vertically in the piping. The measuring media must flow from bottom to top.
- Keep the device as far as possible from pipe vibrations and powerful magnetic fields.
- The piping should be the same size as the connection size of the flowmeter.
- Inlet and outlet sections are generally not required. Care should be taken to avoid flow turbulence, pulsations, pressure shocks and other flow instabilities in order to prevent measuring inaccuracies, increased wear or damage.
- When selecting devices, pay close attention to the chemical resistance of the wetted parts of the device and the process connection gaskets in relation to the measuring medium.
- Avoid pulsating flow of the measuring medium. Use the optional float damping if necessary.
- For gaseous measuring media we recommend an undisturbed inlet length of five times the inside diameter of the piping in accordance with VDI / VDE Directive 3513 sheet 3. Additional measures such as flow straighteners or perforated plates may be necessary for highly unbalanced flow profiles.
- Avoid contamination of gaseous measuring media (refer to BGR 132-7.3.2.2.2).
- For liquid measuring media, the nominal size of the piping should be dimensioned as large as possible (if economically viable).
- Avoid gas inclusions in liquid measuring media.
- Use slow opening valves.
- If the flowmeter is installed in a pipeline where decommissioning is impossible or inexpedient, a bypass line should be provided.
- Shut-off and throttle valves should preferably be attached to the outlet of the flowmeter.

**Fig. 1: Installation of the flowmeter (example)**

Refer to VDI/VDE Directive 3513 sheet 3, Selection and Installation Recommendations for Variable Area Flowmeters.

### Sensor insulation

**Fig. 2: Insulation of the flowmeter**

As shown in Fig. 2, the flowmeter may only be insulated up to the flange diameter.

# VA Master FAM540

## Metal Cone Variable Area Flowmeter

### Operating conditions

A variable area flowmeter is specified for a defined set of operating conditions of the measuring medium. For liquids and gases, these are pressure and temperature-related properties (density and viscosity) under operating conditions.

For gases, in particular, this means operating at a specific operating pressure and operating temperature. The specified accuracy of the device always refers to the operating conditions underlying the specification.

### Temperature data

The following diagram shows the maximum permissible measuring medium temperature depending on the ambient temperature.

Fig. 3: Medium temperature ( $T_{\text{medium}}$ ), ambient temperature ( $T_{\text{amb}}$ )

- ① Devices with alarm output -20 ... 70 °C (-4 ... 158 °F)
- ② Devices with current output -40 ... 70 °C (-40 ... 158 °F)
- ③ With insulation

### NOTE

When using in potentially explosive atmospheres, observe the temperature information in the ATEX / IECEx limit values starting from „Safety specifications ATEX / IECEx“ on page 34 and the FM / cCSAus limit values tables starting from „Safety specifications FM, cCSAus“ on page 43!

### Pressure loss

The available operating pressure at the measuring point must be higher than the pressure loss listed for the flowmeter in the specifications.

It is important to also consider the pressure loss downstream from the flowmeter due to losses in the piping and other fittings.

### Prevention of compression oscillations when measuring gases

With low flow amounts and low operating pressure, so-called compression oscillations of the float can occur.

If the maximum upstream pressure listed in the specifications is not reached, the flowmeter can optionally be equipped with a gas damper.

To prevent self-generated compression oscillations, note the following information from VDI / VDE 3513 Sheet 3:

- Select a flowmeter with the lowest possible pressure loss.
- Minimize the piping length between the flowmeter and the closest up or downstream throttling location.
- Restrict the usual measuring range from the usual 10 ... 100 % to 25 ... 100 %.
- When setting the flow rate value, always start assuming larger values.
- Increase the operating pressure and consider its effect on the flow rate values due to the change in gas density at the new operating conditions.
- Minimize non-throttled, free volumes upstream and downstream of the device.

### Pressure shocks

Especially when measuring gases, it is possible that pressure or shock waves can occur when fast opening solenoid valves are employed and the piping cross-sections are not throttled, or if there are gas bubbles in liquids.

As a result of the sudden expansion of the gas in the piping, the float is forcibly driven against the upper floatstop.

Under certain conditions, this can lead to destruction of the device.

Gas damping is not suited to compensating for pressure shocks!

### Solids content in the measuring medium

Variable area flowmeters have only limited suitability for measuring media containing solids.

Depending on the concentration, particle size and type of solid, increased mechanical abrasion may occur, especially at the critical measuring edge of the float.

In addition, solidified deposits on the float can change its weight and shape.

These effects can lead to erroneous measurement results, depending on the float type.

In general, the use of appropriate filters is recommended in such applications.

For the flow measurement of measuring media containing magnetic particles, we recommend the installation of a magnetic separator upstream of the variable area flowmeter.

### Float designs

Fig. 4: Float designs

#### Float "S":

Basic shape of float.

Low flow rates, minimal pressure losses, essentially independent of viscosity; lower upstream pressure required for gas measurement.

#### Float "N":

Higher flow ranges, average pressure losses, well suited to liquids with minimum viscosity; higher minimum upstream pressure requirements for gas measurements.

#### Float "X":

Highest flow rates, maximum pressure losses, well suited to liquids with minimum viscosity; higher minimum upstream pressure requirements for gas measurements.

### Measuring range limits

Fig. 5: Flow rate depending on float shape and weight (example)

- ① Pressure loss (dP in mbar)
- ② Diameter of the float weight (mm)
- ③ x 1000 l/h water

For measuring range limits depending on nominal size and float type, refer to the measuring range tables.

### Calculating the viscosity influence number (VIN)

The floats are designed geometrically so as to be independent of viscosity within broad limits. This means that the measuring medium viscosity can vary within these limits without resulting in a change of scale.

The viscosity influence number (VIN) is given in the device measuring range tables.

- If the calculated VIN is greater than the listed VIN, viscosity has no influence on the measurements.
- If the calculated VIN is greater than the listed viscosity, the flowmeters are equipped from the factory with a scale adjusted to the viscosity.

$$VIN = \eta \cdot \sqrt{\frac{(\rho_s - 1) \cdot 1}{(\rho_{s1} - \rho_1) \cdot \rho_1}}$$

#### Legend

$\eta$	Dynamic viscosity of the measuring medium [mPa s]
$\rho_s$	Density of the float in accordance with the selection in the measuring range table ( $r = 8.02 \text{ g/cm}^3$ )
$\rho_{s1}$	Density of the float being used
$\rho_1$	Density of the measuring medium

# VA Master FAM540 Metal Cone Variable Area Flowmeter

## Indicator and transmitter

A magnet in the float translates the height of the float as a measurement for the flow to the decouple-proof magnet follower system of the flowmeter, which is directly connected to the indicator pin.

For analog indicators, the flow value is shown by the indicator on the scale. For indicators with a two-wire transmitter, the indicator position is additionally measured directly at the axis. A standard eddy-current brake is used to dampen indicator vibrations and ensure outstanding readability.

The indicator/transmitter unit is attached to the flowmeter with 2 screws in a reproducible manner. To facilitate installation, the indicator can be removed. A name plate on the flowmeter bracket allows you to assign a unique identifier at a later date.

### Analog indicator with or without alarm signaling unit

The analog indicators are available with or without an alarm signaling unit. The alarm signaling units are housed on an alarm module that can also be retrofitted. It is available as a single (min. or max. alarm) or dual (min. or max. alarm) alarm module.

G10452

**Fig. 6: Analog indicator**  
① Analog indicator ② Alarm module (option)

## Product highlights

- Decouple-proof and hysteresis-free magnet follower system.
- The device conforms to NAMUR Recommendations NE43, NE53, NE107.
- Installing and uninstalling the analog indicator on the meter tube is possible without opening the indicator housing.
- Reading repeatability:  $\pm 0.25\%$  of scale end value.
- The alarm signaling unit can be retrofitted as an alarm module.
- The switching points of the alarm signaling units are adjustable without removing the scale.
- The set switching points of the alarm signaling units are visible from the exterior.

## Alarm signaling unit

Additional switching amplifiers are needed to operate the alarm signaling units.

See chapter „Ordering Information“ on page 50 for further information.

### Alarm signaling unit specifications

Operating mode	bistable
Reproducibility	$\pm 0.5\%$ of scale end value
Nominal voltage	8 V DC (Ri approx. 1 k $\Omega$ )
Operating voltage	5 ... 25 V DC
Switching frequency, max.	3 kHz

## Switching amplifier

For analog indicators with alarm signaling units (model FAM54xB/C/Dx)

### Specifications

Power supply	230 V AC, +10 % / -15 %, 45 ... 60 Hz 115 V AC, +10 % / -15 %, 45 ... 60 Hz 24 V DC, +10 % / -15 %
Output	1 or 2 switching relays with potential-free changeover contacts
Switching capacity	Maximum 250 V, maximum 4 A, maximum 500 VA
Maximum permissible cable length	Between switch amplifier and alarm signaling unit: 300 m (984 ft)
Permissible ambient temperature	-20 ... 60 °C (-4 ... 140 °F)
Electrical connection	Screw terminals, maximum 2.5 mm <sup>2</sup> (14 AWG)
Type of assembly	35 mm top-hat rail in acc. with EN 60715:2001
IP rating	IP20 in accordance with EN 60529
Weight	Approx. 150 g (0.3 lb)

### Analog indicator with transmitter

The electronic transmitter uses two-wire technology. An optional LCD indicator offers the possibility of adjusting on-site to changed measuring medium parameters.

For models with an LCD indicator, ABB recommends that you use a bar graph scale to avoid differences between a product scale and the flow rate shown on the LCD indicator.

Fig. 7: LCD indicator with operating buttons and magnet stick markings

- ① ◀ button    ② ▶ button    ③ LCD indicator    ④ ▼ button  
⑤ ▲ button    ⑥ Dots for magnet stick operation

### Product highlights

- 4 ... 20 mA current output.
- Current output for an alarm can be configured to 21 ... 23 mA (NAMUR NE43).
- Programmable binary output (min. / max. device alarm, general alarm or pulse output).
- Parameterization using HART communication via handheld terminal or DSV401 (SMART VISION).
- Damping: 1 ... 100 s configurable (5  $\tau$ ).
- Low flow cut-off: 0 ... 5 % for current and pulse output.
- Measuring medium parameters can be changed at any time (pressure and temperature influence, density, units, etc.).
- Simulation of current and binary output (manual process execution).
- EEPROM storage of counter readings and parameters specific to the measuring point (over 10 years).
- LCD indicator can be retrofitted.

### LCD indicators

- High-contrast LCD indicator.
- Flow rate and flow totalizer value display.
- Plain text fault diagnostics
- Menu-guided parameterization with four buttons.
- Parameterization of the device using a magnet stick without opening the housing.

# VA Master FAM540

## Metal Cone Variable Area Flowmeter

### Electrical connections

#### NOTE

When using in potentially explosive atmospheres, observe the electrical data in the ATEX / IECEx limit value tables starting from „Safety specifications ATEX / IECEx“ on page 34 and the FM / cCSAus limit value tables starting from „Safety specifications FM, cCSAus“ on page 43!

#### Analog indicator with alarm signaling unit Model FAM54xB/C/Dx

Fig. 8: Alarm signaling unit

- ① Maximum alarm signaling unit ② Minimum alarm signaling unit  
③ Switch amplifier (F) Flowmeter

#### Alarm signaling unit specifications

Operating mode	bistable
Reproducibility	±0.5% of scale end value
Nominal voltage	8 V DC (R <sub>i</sub> approx. 1 kΩ)
Operating voltage	5 ... 25 V DC
Switching frequency, max.	3 kHz

#### Analog indicator with transmitter Model FAM54xE/Fx

Fig. 9: Analog indicator with transmitter

④ HART modem

#### Legend

U <sub>B</sub>	Operating voltage
U <sub>S</sub>	Input terminal voltage
R <sub>B</sub>	Maximum permissible load for power supply unit (e.g. indicator)
R	Maximum permissible load for output circuit; is determined by power supply unit
	Functional earth

## Cables

Maximum cable length 1500 m, AWG 24 twisted and shielded.

## Power supply / current output

Terminals 31 / 32 serve both as a connection for the power supply and as a 4 ... 20 mA current output for the transmitter. The current output is also used for HART communication.

Power supply	
Terminals	31 / 32
Voltage	Standard: 10 ... 46 V DC Explosion-proof design: 10 ... 30 V DC.
Residual ripple	Maximum 5 % or $\pm 1.5 V_{SS}$
Power consumption	< 1 W

Current output	
Terminals	31 / 32
Output	4 ... 20 mA, can be configured to 21 ... 23 mA for an alarm (in accordance with NAMUR NE43)
Load	Minimum > 250 $\Omega$ , maximum 1500 $\Omega$ (for I at alarm = 23.0 mA)
Temperature effect	$\leq 8 \mu A/K$
Power consumption	< 1 W

Fig. 10: Load diagram of the current output

## HART output

### Model FAM54xE/Fx

Specifications	
Terminals	31 / 32
Configuration	– Directly on the device – Using DAT200 Asset Vision Basic software and HART-DTM
Transmission	FSK modulation on current output 4 ... 20 mA in accordance with Bell 202 standard
Baud rate	1200 baud
Display	Logic 1: 1200 Hz Logic 0: 2200 Hz
Maximum signal amplitude	1.2 mA <sub>SS</sub>
Load (RB) at current output	250 ... 1500 $\Omega$

See the separate interface description for detailed information.

## System integration

In conjunction with the DTM (Device Type Manager) available for the device, the corresponding framework applications in accordance with FDT 0.98 or 1.2 (DAT200 Asset Vision Basic) can be used for communication (configuration, parameterization). Other tool/system integrations (e.g., Emerson AMS/Siemens PCS7) are available on request. The necessary DTMs and additional files can also be downloaded from [www.abb.com/flow](http://www.abb.com/flow).

## Programmable binary output

Terminals 41 / 42 are used as a primary programmable binary output. The pulse output, general alarm, min./max. alarm and general alarm functions, as well as "no function" can be configured using the software.

Binary output	
Terminals	41 / 42
Output	– NAMUR contact (DIN 19234) or – Standard optoelectronic coupler ( $U_H = 16 \dots 30$ V DC)
Switching behavior	Configurable as normally closed or normally open contacts
Internal resistance	With contact open > 10 k $\Omega$
Switching current	Maximum 15 mA
Output voltage	Minimum $U_o$ 2 V DC

## Pulse output

Terminals	41 / 42
Pulse width	5 ... 256 ms, maximum 50 % of the period
Frequency $f_{max}$	Maximum 50 Hz

# VA Master FAM540

## Metal Cone Variable Area Flowmeter

### Model FAM541 - Standard design

G10448

Fig. 11: Model FAM541

#### Scale

Design optionally with percentage scale or product scale.

#### Gas damping

Option, for preventing compression oscillations in case of gas measurements with low operating pressure.

#### SIL approval

- SIL2 declaration of conformity for devices with alarm function.
- Manufacturer's declaration (SIL1) in accordance with IEC 61508 / IEC61511 for devices with a current output of 4 ... 20 mA.

#### Measuring accuracy

1.6 % qg = 50 % in accordance with VDE / VDI 3513, sheet 2, optional 1 % of upper range value.

#### Measuring range limits and span limits

Measuring span: 10:1

For detailed information about measuring ranges, see chapter „Measuring range table“ on page 12.

#### Temperature limits °C (°F)

##### Medium temperature range

- -55 ... 400 °C (-67 ... 752 °F)

##### Ambient temperature range

- -40 ... 85 °C (-40 ... 185 °F)

#### NOTE

- When using in potentially explosive atmospheres, observe the temperature information in the ATEX / IECEx limit values starting from 34 and the FM / cCSAus limit values tables starting from „Safety specifications FM, cCSAus“ on page 43!
- Also observe the information in chapter „Temperature data“ on page 4!

#### Process connections

- Flange in accordance with EN 1092-1 (PN 16, PN 40)
- Flange in accordance with DIN 2501 (PN 63, PN 100)
- Flange with groove in accordance with DIN 2501
- Flange in accordance with ASME B16.5
- G 1" female thread (1/2" meter tube)
- G 1 1/2" female thread (1" meter tube)

#### Pressure ratings

- Standard pressure rating: PN 40 (PN 16 for DN 100 [4"])
- Flange in accordance with DIN / EN: PN 16, PN 40, PN 63, PN 100
- Flange in accordance with ASME: CL 150, CL 300, CL 600

Other designs and pressure ratings are available upon request.

See chapter „Material load“ on page 11.

#### Maximum permissible operating pressure

64 bar, 100 bar, 160 bar, 250 bar  
(CL 600 /CL 900 /CL 1500 / CL 2500)

## Materials

### Materials for the indicator housing

Component	Material
Indicator housing	Standard: aluminum, powder-coated Option: stainless steel 1.4408
Powder coating	Epoxy paint 80 ... 100 µm Bottom color: RAL 7012 Cover color: RAL 9002
Housing gasket (O-ring)	Buna N®
Sight glass	Shatterproof glass

### Materials for wetted parts

Component	Material
Meter tube	Stainless steel 1.4404 (316 L)
Conical meter pipe	Stainless steel 1.4571 (316 Ti), only DN 15 (1/2")
Flange	Stainless steel 1.4404 (316 L)
Variable area	Standard: stainless steel 1.4571 (316 Ti), Option: stainless steel 1.4571 (316 Ti)
Gas damping (option)	Stainless steel 1.4571 (316 Ti)

## Material load

Fig. 12: DIN flange made from stainless steel

1) Connection nominal size

2) The upper range value can be selected anywhere within these limits. The measuring span is 10:1.

Example: upper range value 12 m<sup>3</sup>/h (USgal/h) water, measuring span of device 1.2 to 12 m<sup>3</sup>/h (USgal/h) water.

3) Order code for meter tube / float combination (versions 18, 19), see chapter „Main ordering information FAM541“ on page 50.

4) Viscosity influence number (VIN), see chapter „Calculating the viscosity influence number (VIN)“ on page 5.

5) The listed pressure loss values are based on the listed upper range value.

6) The minimum required pressure (abs) to prevent compression oscillations (float bounce) in the meter tube. The specifications for the minimum required pressures with and without damping are based on average installation conditions. Some installations may have higher values (high free volume upstream / downstream of the device).

7) Cylinder / piston damping. For nominal diameters DN 15 ... DN 80 (1/2 ... 3").

8) These meter tube / float combinations always require gas piston damping for gas measurements.

## Metal Cone Variable Area Flowmeter

### Model FAM544 - hygienic design

G10449

**Fig. 15: Model FAM544 in hygienic design**

This model has been specially constructed with threaded connections in accordance with DIN 11851 to meet the more stringent hygienic requirements of the food and beverage industry in respect of biological cleaning.

All parts of the flowmeter that come into contact with the measuring medium are welded and polished. There are no gaps or other empty areas. The device is suitable for cleaning or sterilization with steam, acids and alkali. The device is also CIP-cleanable.

#### Scale

Design optionally with percentage scale or product scale.

#### Gas damping

Not available.

#### SIL approval

- SIL2 declaration of conformity for devices with alarm function.
- Manufacturer's declaration (SIL1) in accordance with IEC 61508 / IEC61511 for devices with a current output of 4 ... 20 mA.

#### Measuring accuracy

1.6 % qg = 50 % in accordance with VDE / VDI 3513, sheet 2, optional 1 % of upper range value.

#### Measuring range limits and span limits

Measuring span: 10:1

For detailed information about measuring ranges, see chapter „Measuring range table“ on page 18.

#### Temperature limits °C (°F)

##### Medium temperature range

- -55 ... 400 °C (-67 ... 752 °F)

##### Ambient temperature range

- -40 ... 85 °C (-40 ... 185 °F)

#### NOTE

- When using in potentially explosive atmospheres, observe the temperature information in the ATEX / IECEx limit values starting from 34 and the FM / cCSAus limit values tables starting from „Safety specifications FM, cCSAus“ on page 43!
- Also observe the information in chapter „Temperature data“ on page 4!

#### Process connections

- Threaded spud in accordance with DIN 11851 (SC 25 ... SC 80)
- Threaded spud in accordance with SMS 1145 (DN 38 ... DN 102)

#### Connection dimensions

Nominal Diameter	Meter tube size	SMS 1145	DIN 11851
DN 25	1/2"	SC 25	—
DN 40	1"	SC 40	DN 38
DN 50	2"	SC 50	DN 51
DN 80	3"	SC 80	DN 76
DN 100	4"	—	DN 102
DN 125	4"	SC 125	—

#### Pressure ratings

Threaded spuds in accordance with DIN 11851:

- PN 25 for DN 50 ... DN 80 (2 ... 3")
- PN 40 for DN 25 ... DN 40 (1 ... 1 1/2")
- PN 16 for DN 125 (5")

Threaded spud in accordance with DIN 1145:

- PN 6 for (DN 38 ... DN 102)

See chapter „Material load“ on page 17.

#### Maximum permissible operating pressure

See chapter „Material load“ on page 17.

## Materials

### Materials for the indicator housing

Component	Material
Indicator housing	Standard: aluminum, powder-coated Option: stainless steel 1.4408
Powder coating	Epoxy paint 80 ... 100 µm Bottom color: RAL 7012 Cover color: RAL 9002
Housing gasket (O-ring)	Buna N®
Sight glass	Shatterproof glass

### Materials for wetted parts

Component	Material
Meter tube	Stainless steel 1.4404 (316 L)
Conical meter pipe	Stainless steel 1.4571 (316 Ti), only DN 15 (1/2)
Variable area	Stainless steel 1.4571 (316 Ti)

## Material load

Process connection	Nominal Diameter	PS <sub>max</sub>	TS <sub>min</sub>	TS <sub>max</sub>
DIN 11851	DN 15 ... 40 (1/2 ... 1 1/2")	40 bar (580 psi)	-40 °C (-40 °F)	140 °C (284 °F)
	DN 50 ... 100 (2 ... 4")	25 bar (362 psi)	-40 °C (-40 °F)	140 °C (284 °F)
	DN 125 (5")	16 bar (232 psi)	-40 °C (-40 °F)	140 °C (284 °F)
SMS 1145	DN 38 ... 102 (1 1/2 ... 4")	6 bar (87 psi)	-40 °C (-40 °F)	140 °C (284 °F)

## Metal Cone Variable Area Flowmeter

### Measuring range table

#### NOTE

The "FlowCalc" program, which is available as a free download from [www.abb.com/flow](http://www.abb.com/flow), can be used to calculate flow rates, pressure losses, and upstream pressure requirements.

The data listed applies to water at 20 °C (68 °F), 1 kg/dm<sup>3</sup> (62.43 lb/ft<sup>3</sup>), 1 mPas (1 cP) and to air at 0 °C (70 °F), 1013 mbar (14.7 psia).

1) Connection nominal size

2) The upper range value can be selected anywhere within these limits. The measuring span is 10:1.

Example: upper range value 12 m<sup>3</sup>/h (USgal/h) water, measuring span of device 1.2 to 12 m<sup>3</sup>/h (USgal/h) water.

3) Order code for meter tube /float combination (versions 18, 19), see chapter „Main ordering information FAM544“ on page 54.

4) Viscosity influence number (VIN), see chapter „Calculating the viscosity influence number (VIN)“ on page 5.

5) The listed pressure loss values are based on the listed flow rate end value.

6) The minimum required pressure (abs) to prevent compression oscillations (float bounce) in the meter tube. The specifications for the minimum required pressures are based on average installation conditions. Some installations may have higher values (high free volume upstream / downstream of the device).

7) Only for threaded spuds in accordance with DIN 11851

8) Only for threaded spuds in accordance with SMS 1145

## Metal Cone Variable Area Flowmeter

### Model FAM545 - with PTFE liner

Fig. 17: Model FAM545 with PTFE liner

#### NOTE

If the device is used in potentially explosive atmospheres, a minimum measuring medium conductivity of  $> 10^{-8}$  S/m must be guaranteed.

See also chapters „Use in potentially explosive atmospheres according to ATEX and IECEx“ on page 32 and „Dimensions“ on page 25.

#### Scale

Design optionally with percentage scale or product scale.

#### Gas damping

Not available.

#### SIL approval

Not available.

#### Measuring accuracy

2.5 % qg = 50 % in accordance with VDE / VDI 3513, sheet 2.

#### Measuring range limits and span limits

Measuring span: 10:1

For detailed information about measuring ranges, see chapter „Measuring range table“ on page 24.

#### Temperature limits °C (°F)

##### Medium temperature range

- -20 ... 125 °C (-4 ... 257 °F)

##### Ambient temperature range

- -40 ... 85 °C (-40 ... 185 °F)

#### NOTE

For use in potentially explosive atmospheres, observe the temperature information in the ATEX / IECEx limit values starting from 34 and the FM / cCSAus limit values tables starting from „Safety specifications FM, cCSAus“ on page 43!

- Also observe the information in chapter „Temperature data“ on page 4!

#### Process connections

- Flange in accordance with DIN 2501 (DN 25 ... DN 80)
- Flange in accordance with ASME B16.5

#### Pressure ratings

- Standard pressure rating PN 40
- Flange in accordance with DIN 2501 (DN 40 ... DN 63)
- Flange in accordance with ASME CL 150, CL 300

See chapter „Material load“ on page 23.

#### Maximum permissible operating pressure

50 bar (CL 300), (higher pressures available upon request).

## Materials

### Materials for the indicator housing

Component	Material
Indicator housing	Standard: aluminum, powder-coated Option: stainless steel 1.4408
Powder coating	Epoxy paint 80 ... 100 µm Bottom color: RAL 7012 Cover color: RAL 9002
Housing gasket (O-ring)	Buna N®
Sight glass	Shatterproof glass

### Materials for wetted parts

Component	Material
Meter tube	Stainless steel 1.4571 (316 Ti)
Conical meter pipe	PTFE
Flange	Stainless steel 1.4571 (316 Ti)
Variable area	PTFE

## Metal Cone Variable Area Flowmeter

### Model FAM546 - with heating jacket

G10451

Fig. 21: Model FAM541

#### Scale

Design optionally with percentage scale or product scale.

#### Gas damping

Option, for preventing compression oscillations in case of gas measurements with low operating pressure.

#### SIL approval

- SIL2 declaration of conformity for devices with alarm function.
- Manufacturer's declaration (SIL1) in accordance with IEC 61508 / IEC61511 for devices with a current output of 4 ... 20 mA.

#### Measuring accuracy

1.6 % qg = 50 % in accordance with VDE / VDI 3513, sheet 2, optional 1 % of upper range value.

#### Measuring range limits and span limits

Measuring span: 10:1

For detailed information about measuring ranges, see chapter „Measuring range table“ on page 28.

#### Temperature limits °C (°F)

##### Medium temperature range

- -55 ... 400 °C (-67 ... 752 °F)

##### Ambient temperature range

- -40 ... 85 °C (-40 ... 185 °F)

#### NOTE

- When using in potentially explosive atmospheres, observe the temperature information in the ATEX / IECEx limit values starting from 34 and the FM / cCSAus limit values tables starting from „Safety specifications FM, cCSAus“ on page 43!
- Also observe the information in chapter „Temperature data“ on page 4!

#### Process connections

- Flange in accordance with DIN 2501 (DN 50 (2") ... DN 100 (4"))
- Flange in accordance with EN 1092-1 (DN 25 (1"))
- Flange in accordance with ASME B16.5

#### Heating jacket connection

Female thread G 1/4, at the back of the meter tube.

#### Pressure ratings

- Standard pressure rating: PN 40 (PN 16 for DN 100 (4"))
- Flange in accordance with DIN / EN: PN 16, PN 40, PN 63, PN 100
- Flange in accordance with ASME: CL 150, CL 300, CL 600
- Heating jacket: PN 16

See chapter „Material load“ on page 27.

#### Maximum permissible operating pressure

- Meter tube: 100 bar (CL 600).
- Heating jacket: 16 Bar (232 psi)

Higher pressures on request.

## Materials

1) Connection nominal size

2) The upper range value can be selected anywhere within these limits. The measuring span is 10:1.

Example: upper range value 12 m<sup>3</sup>/h (USgal/h) water, measuring span of device 1.2 to 12 m<sup>3</sup>/h (USgal/h) water.

3) Order code for meter tube /float combination (versions 18, 19), see chapter „Main ordering information FAM546“ on page 60.

4) Viscosity influence number (VIN), see chapter „Calculating the viscosity influence number (VIN)“ on page 5.

5) The listed pressure loss values are based on the listed flow rate end value.

6) The minimum required pressure (abs) to prevent compression oscillations (float bounce) in the meter tube. The specifications for the minimum required pressures with and without damping are based on average installation conditions. Some installations may have higher values (high free volume upstream / downstream of the device).

7) Cylinder / piston damping. For nominal diameters DN 15 ... DN 80 (1/2 ... 3").

8) These meter tube/float combinations always require gas piston damping for gas measurements.

## Use in potentially explosive atmospheres according to ATEX and IECEx

**NOTE**  
Further information on the approval of devices for use in potentially explosive atmospheres can be found in the type examination certificates or the relevant certificates at [www.abb.com/flow](http://www.abb.com/flow).

### Device overview

The devices are designed for maximum versatility. This is achieved through a combination of several types of protection within each device. All devices are suitable for use in potentially explosive atmospheres with combustible dust. For detailed installation instructions and terminal assignments, refer to chapter „Electrical connections“ on page 8.

1) Order code "Explosion protection and approvals" (versions 9, 10); refer to chapter „Ordering Information“ on page 50.

## Ex-marking

### NOTE

- Depending on the design, a specific marking in accordance with ATEX or IECEx applies.
- ABB reserves the right to modify the Ex-marking. Refer to the name plate for the exact marking.

# VA Master FAM540

## Metal Cone Variable Area Flowmeter

### Signal cable

The Ex calculations are based on temperatures of 80 °C (176 °F) at the cable input. For this reason, cables with a specification of 80 °C (176 °F) must be used.

For cables limited to 70 °C (158 °F), a maximum ambient temperature of  $T_{amb} = 60$  °C (140 °F) applies.

The resulting new maximum measuring medium temperatures are determined as follows:

- Calculate a new ambient temperature:  
 $T_{amb\ new} = T_{amb} + 10$  °C (18 °F).
- Use the calculated ambient temperature  $T_{amb\ new}$  to determine the new associated permissible measuring medium temperatures in the tables.
- Please use the limit value tables with the original ambient temperature  $T_{amb}$  to determine the relevant temperature class. See chapter „Safety specifications ATEX / IECEx“ on page 34, Tables 1 through 5.

### Example:

- $T_{amb} = 50$  °C (122 °F) becomes  
 $T_{amb\ new} = 60$  °C (140 °F).
- Determine the measuring medium temperature  
 $T_{amb} = 60$  °C (140 °F).
- Determine the temperature class for  
 $T_{amb} = 50$  °C (122 °F).

### Earthing

G10433

Fig. 27: Earthing

- ① Earthing terminal
- ② Potential equalization in accordance with EN 60079-0

The FAM540 housing must be correctly earthed in order to ensure proper function and safe operation.

Copper wires with a minimum cross-section of 6 mm<sup>2</sup> (AWG 10) must be used to connect to the potential equalization.

---

### **i** NOTE

---

The operator must ensure that when connecting the protective earth (PE), there are no potential differences between protective earth (PE) and potential equalization, even in the event of a fault.

---

## Use in potentially explosive atmospheres in accordance with FM and cCSAus

### NOTE

Further information on the approval of devices for use in potentially explosive atmospheres can be found in the type examination certificates or the relevant certificates at [www.abb.com/flow](http://www.abb.com/flow).

### Ex-marking

### NOTE

- Depending on the design, a specific marking in accordance with FM applies.
- ABB reserves the right to modify the Ex-marking. Refer to the name plate for the exact marking.

## Metal Cone Variable Area Flowmeter

### Electrical connections

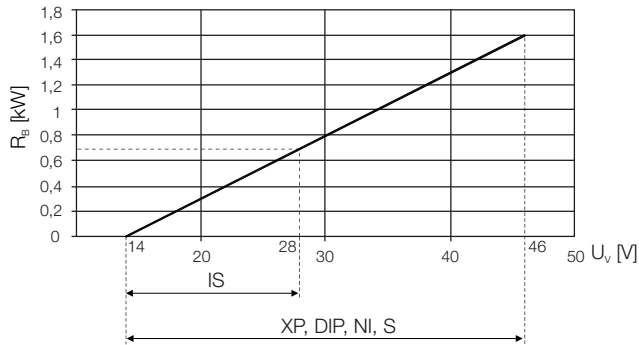

G10447

Fig. 28: FM / cCSAus electrical connection

① FM Approved IS Barrier ② Potential equalization

Terminal	Function
31 / 32	Power supply / current output / HART output
41 / 42	Binary output
	Alarm signaling unit (min.)
51 / 52	Alarm signaling unit (max.)

G10446

Fig. 29: Terminals 31 / 32, power supply / load

$U_V$  Power supply

$R_B$  Maximum permissible load in the power supply (z. B. indicator)

The minimum voltage  $U_V = 0$  V is based on a load of  $0 \Omega$ .

### Installation instructions

The concept of intrinsic safety enables multiple intrinsic safety devices with FM or CSA approval to be interconnected, without entity parameters being examined specifically, subject to observation of the following conditions:

- $U_o$  or  $V_{oc}$  or  $V_t \leq 0$  V max,  $I_o$  or  $I_{sc}$  or  $I_t \leq I_{max}$ ,  $C_a$  or  $C_o \geq C_i + C_{cable}$ ,  $L_a$  or  $L_o \geq L_i + L_{cable}$ ,  $P_o \leq P_i$ .
- For installation in Class II and III environments, dust-proof ignition blocks must be used.
- Devices connected to such apparatus must not use or generate rms or direct voltages in excess of 250 V.
- Installation must meet the requirements of ANSI / ISA RP 12.6 "Installation of Intrinsically Safe Systems for Hazardous (Classified) Locations" and the National Electrical Code (ANSI / NFPA 70) sections 504, 505 and CEC.
- The configuration of the associated apparatus must have Factory Mutual Research and CSA approval in accordance with the entity concept.
- Devices must be installed in compliance with the manufacturer-supplied installation drawing of the associated apparatus.
- Changes to drawings are only permitted subject to prior approval from Factory Mutual Research and CSA.
- Only shielded twisted pair cables may be used (see above).

### NOTE

For intrinsically safe installations, the FAM540 must be installed as illustrated in the "Intrinsic Safety Control Drawing SDM-10-A0253".

## Earthing

**Fig. 30: Earthing**

- ① Earthing terminal
- ② Potential equalization in accordance with EN 60079-0

The FAM540 housing must be correctly earthed in order to ensure proper function and safe operation.

Copper wires with a minimum cross-section of 6 mm<sup>2</sup> (AWG 10) must be used to connect to the potential equalization.

---

### **i** NOTE

---

The operator must ensure that when connecting the protective earth (PE), there are no potential differences between protective earth (PE) and potential equalization, even in the event of a fault.

---

## Signal cable

For ambient temperatures below 5 °C (41 °F) or above 40 °C (104 °F), signal cables that are suited for the minimum/maximum ambient temperatures in question must be used.

Only use signal cables made from copper, copper-coated aluminum, or aluminum.

The recommended tightening torque for the terminals is 0.8 Nm (7 in. lb) or higher, in accordance with the specification.

## Power supply

Installation must comply with the requirements of the National Electric Code® (ANSI / NFPA70).

Unless specified otherwise in regional or national standards, power supply lines must be dimensioned to AWG 20. Installation must be carried out as outlined in the latest edition of the manufacturer's instruction manual.

A power supply with the following requirements must be used to provide power:

- SELV (safety extra-low voltage) with LPS (current-limited source) and double or reinforced insulation.
- Maximum output current of 8 A (current-limited output).
- In accordance with National Electric Code® (ANSI / NFPA70) connected to NEC class 2.

Aluminium / Thread 1/2 in. NPT (Indicator type A with blind plug M25x1.5)										2
Stainless steel / Cable gland M20 x 1.5 (Indicator type A with blind plug M25x1.5)										1) 3
Stainless steel / Thread 1/2 in. NPT (Indicator type A with blind plug M25x1.5)										1) 4
<b>Explosion Protection Certification and Approvals</b>										
Without										Y0
ATEX / IECEx, (Zone 2 / 21), Ex nA, c, Ex tD										2) B1
ATEX / IECEx, (Zone 1 / 21), Ex ia, Ex nA, c, Ex tD										2) A4
ATEX / IECEx, (Zone 1 / 21), Ex d, Ex ia, Ex nA, c, Ex tD										3) A9
FM / CSA, Class I, Div 1, 2 (Zone 1, 2), XP + IS, NI										4) F3
FM / CSA, Class I, Div 1, 2 (Zone 1, 2), IS, NI										4) F4
<b>Process Connection</b>										
Flange										F1
<b>Connection Size</b>										
DN 25 (1 in.)										B
DN 50 (2 in.)										C
DN 80 (3 in.)										D
DN 100 (4 in.)										E
<b>Float Design</b>										
Standard										1
With gas damping										3
<b>Pressure Rating</b>										
PN 16										D2
PN 40										D4
PN 63										D5
PN 100										D6
ASME CL 150										A1
ASME CL 300										A3
ASME CL 600										A6

## Main ordering information

VA Master FAM546 Metal Cone Variable Area Flowmeter, with steam jacket, for temperature-sensitive applications	X	XX
<b>Design Level</b> (Specified by ABB)	X	
<b>Tube / Float Combination</b> (Specified by ABB.) See flow range tables.		XX

## Additional ordering information

VA Master FAM546 Metal Cone Variable Area Flowmeter, with steam jacket, for temperature-sensitive applications	XX	XX	XX	XX	XX	XX	XX	XX	XXX
<b>Primary</b>									
Without, secondary only	5)	Y0							
Standard	6)	Y1							
<b>Measuring Deviation</b>									
Class 1.6 acc. VDE / VDI 3513	6)	A1							
1 % of full scale		AA							
4 % of full scale (high viscosity, without calculation)		AK							
4 % of full scale (high viscosity, with calculation)		AL							
<b>Material: 3.1, 3.2 Inspection / NACE</b>									
Material monitoring with inspection certificate 3.1 acc. EN 10204									C2
Material monitoring with inspection certificate 3.2 acc. EN 10204									C3
Material monitoring NACE MR 01-75 with inspection certificate 3.1 acc. EN 10204									CN
<b>Material: 2.1 Compliance</b>									
Declaration of compliance with the order 2.1 acc. EN 10204									C4
<b>Certificates: 3.1 Visual, Dimensional and Functional Test</b>									
Inspection certificate 3.1 acc. EN 10204 of visual, dimensional and functional test									C6
<b>Certificates: 3.1 PMI Test</b>									
Inspection certificate 3.1 acc. EN 10204 of positive material identification PMI									CA
<b>Certificates: 3.1 Pressure Test</b>									
Pressure test acc. AD2000									CB
Test package (pressure test, non-destructive test, welder and welding procedure certificate)									CP
(Non-destructive test = X-ray for welding neck flanges, dye penetration test for slip-on flanges)									
<b>Certificates: Calibration, Test Report</b>									
Certificate of compliance for calibration 2.1 acc. EN 10204									CM
Inspection certificate 3.1 acc. EN 10204 of calibration, with test report									CE
<b>Other Usage Certifications</b>									
Russia - metrological and GOST-R certificate									CG1
Kazakhstan - metrological and GOST-K certificate (In preparation)									CG2
Ukraine - metrological certificate									CG3
Belarus - Metrological Certificate									CG6

# VA Master FAM540

## Metal Cone Variable Area Flowmeter

### Additional ordering information

VA Master FAM546 Metal Cone Variable Area Flowmeter, with steam jacket, for temperature-sensitive applications	XXX	XX	XX	XX	XX	XX	XX	XXX
<b>Other Explosion Protection Certifications and Approvals</b>								
Russia - GOST-Ex and RTN certificate	EG7							
Kazakhstan - Ex Permission certificate (In preparation)	EG3							
Ukraine - GOST-Ex and Ex permission certificate (In preparation)	EG5							
Belarus - GGTN Certificate	EG9							
INMETRO (Brazil)	EB1							
<b>Documentation Language</b>								
German		M1						
English	6)	M5						
Language package Western Europe / Scandinavia (Languages: DE, EN, DA, ES, FR, IT, NL, PT, FI, SV)		MW						
Language package Eastern Europe (Languages: DE, EL, CS, ET, LV, LT, HU, PL, SK, SL, RO, BG)		ME						
<b>Applications</b>								
Degreased for oxygen applications						P1		
<b>Device Identification Plate</b>								
Stainless steel plate with TAG no.						T0		
Adhesive label with TAG no.					6)	TC		
<b>Float Material</b>								
AISI 316Ti SST (1.4571)						6)	F1	
<b>Scale Design</b>								
Direct reading scale						6)	SD	
Percentage scale							SP	
Bargraph						7)	SB	
<b>Ambient Temperature Range</b>								
Extended -40 ... 70 °C (-40 ... 158 °F) / -40 ... 60 °C (-40 ... 140 °F) with Ex protection Exd + Ex tD							8)	R5
Standard -20 ... 70 °C (-4 ... 158 °F) / -20 ... 60 °C (-4 ... 140 °F) with Ex protection Exd + Ex tD							6)	R6
<b>Alarm relay</b>								
Amplifier Model KFA5-SR2-Ex1.W, Single Alarm, 115 V AC 50 / 60 Hz, Ambient Temperature Range -20 ... 60 °C								W11
Amplifier Model KFA6-SR2-Ex1.W, Single Alarm, 230 V AC 50 / 60 Hz, Ambient Temperature Range -20 ... 60 °C								W12
Amplifier Model KFD2-SR2-Ex1.W, Single Alarm, 24 V DC, Ambient Temperature Range -20 ... 60 °C								W13
Amplifier Model KFA5-SR2-Ex2.W, Double Alarm, 115 V AC 50 / 60 Hz, Ambient Temperature Range -20 ... 60 °C								W14
Amplifier Model KFA6-SR2-Ex2.W, Double Alarm, 230 V AC 50 / 60 Hz, Ambient Temperature Range -20 ... 60 °C								W15
Amplifier Model KFD2-SR2-Ex2.W, Double Alarm, 24 V DC, Ambient Temperature Range -20 ... 60 °C								W16

- 1) Not available with Ex d or XP applications
- 2) Version with analog indicator without output signal: Type of protection "c" only available with ATEX approval
- 3) With Ex d approved cable gland. Not available for analog indicator without output signal
- 4) Only with cable entry 1/2 in. NPT
- 5) For Ex devices upon request
- 6) Standard, automatically specified by ABB if not specified by customer
- 7) Recommended for indicator with transmitter 4 ... 20 mA with LCD display
- 8) Not available with analog indicator with alarm

<b>Notes:</b>	

## Our offering:

	Actuators and Positioners		Analytical Instruments
	Device Management, Fieldbus and Wireless		Flow Measurement
	Force Measurement		Level Measurement
	Natural Gas Measurement		Pressure Measurement
	Recorders and Controllers		Temperature Measurement
